Prompt Anatomy

2026

www.promptanatomy.app

Three layers in one prompt

Align all three in the same text — especially when planning work, a delivery, an email, or a team decision.

Layer	What you write	What you get
System	The AI's role in your work and the goal of the answer	Fewer "generic lines" — the answer follows the task logic
Context	Project, audience, constraints, sources, what people already know	Content tied to your situation,not an abstract summary
Who and tone	Who you write for (leadership / client / team), which style	Style fits the situation — less rework

Example (system): You are a B2B marketing analyst preparing clear summaries for leadership.

Example (context): Context: Q3 initiative [NAME], the team already saw [SOURCE], audience: leadership.

Example (tone): Tone: professional but clear; no "marketing fluff"; short and on point.

Five steps: prompt anatomy

1. **Role** — who you are.
2. **Context** — facts, text, or conditions the AI must know before answering.
3. **Output** — format and content the answer must return.
4. **Reasoning** — how to think: steps, logic, criteria.
5. **Quality control** — review, evaluate, compare to the goal; repeat the loop.

Extended parameters (above all five): tone, length, constraints, language — as a global filter for the whole prompt.

Feedback: evaluation leads to tighter reasoning and context.

Template: email or message (draft)

Role: You are my work assistant.

Goal: Draft a message you can send.

Context: To: [team / client / partner]. Facts: [WHAT HAPPENED]. Tone: professional, warm.

Output: 1) Letter, up to 100 words. Three paragraphs: problem; solution; next step (who and when). 2) Message, up to 40 words. The same three parts, one sentence each. If it is not in the input — "Missing:".

Template: meeting or sprint plan

Role: You are my work assistant.

Goal: Build a plan the team uses to make one decision.

Context: Duration: [MINUTES]. Topic: [TOPIC]. Position: [WHO JOINS]. Already agreed: [WHAT YOU AGREED BEFORE].

Output: Table Time | Activity | Goal. Times add up to the duration. Empty duration — 60 min and the line "Assumption: 60 min." Three questions. Each names the decision it unlocks. If it is not in the input — "Missing:".

Template: One message, three versions

Role: You are my work assistant.

Goal: Write the same point at three levels.

Context: Point: [TOPIC]. Reader: [junior / senior, client / internal team]. Draft, if any: [TEXT].

Output: Three blocks, the same facts. Basic: 1 sentence, one action. Intermediate: 4 sentences, action, owner, deadline. Advanced: the same facts, 1 risk, 1 decision. Do not add a fact that is not in the input. If missing — "Missing:".

Template: Text review

Role: You are my work assistant.

Goal: Say what to change first in this text.

Context: Text: [TEXT]. Criteria: clarity; one action; tone.

Reasoning: For each criterion answer "yes" or "no". Next to "no", quote a sentence from the text.

Output: Three lines, one criterion each: yes or no, plus a quote. Then one pair: Was / Should be.

Template: assignment / team learning

Role: You are my work assistant.

Goal: Prepare one team task and the key that shows it is done.

Context: Topic: [TOPIC]. Audience: [TEAM]. Position: [POSITION]. Format: [knowledge check / hands-on task]. Example: [BRIEF].

Reasoning: Take the format only from the field. If the format is empty — stop and write "Missing: format".

Output: Always two blocks. 1) Instruction, up to 120 words: one task, one owner, a deadline. 2) Key. If the format is a knowledge check — the correct answers. If the format is a hands-on task — 3 points that count as done. Facts only from the example. If it is not there — "Missing:".

Quick check

Paste the text you will send.

Role: You are an information critic. You know the AI can invent facts.

Goal: Check the text before it is sent.

Context: Where I will use it: [client email / internal report / proposal / contract / deck]. Domain: [DOMAIN]. Audience: [AUDIENCE]. Text: [TEXT].

Reasoning: Tie each risk to one sentence from the text. One type — one risk.

Output: 1) Three risks: one factual, one legal, one about communication. Each quotes a sentence. 2) Sentences that can be sent unchanged. Quote them. 3) What to check outside the AI. For each item — what exactly to check. 4) What context is missing. A "Missing:" list.

In short: what matters at work

A prompt should clearly include **role** (who you are), **context** (project, audience, what people already know), and **desired output format**. Tone alone or a very short prompt does not say what content and format you expect.
